Statement: Create a Personal Presentation Page in HTML

This exercise will guide you step by step to create a personal presentation page using HTML.

Objective

Create a web page with different sections to learn basic HTML tags and structure content properly.

Steps

1. **Create an HTML file:**
 - Name it **index.html**.
2. **Add the basic structure:**
 - Declare the document type using `<!DOCTYPE html>`.
 - Add the `<html>`, `<head>`, and `<body>` tags.
3. **Define the page header:**
 - Inside the `<head>` tag, add `<title>My Presentation Page</title>` to set the browser tab title.
 - Inside the `<body>` tag, create a main header using `<h1>` containing your name or **"Welcome to My Presentation Page"**.
4. **Presentation Section:**
 - Add a section with a `<h2>` subheading titled **"Presentation"**.
 - Add a `<p>` paragraph describing who you are.
5. **Skills Table:**
 - Add another section with a `<h2>` subheading titled **"My Skills"**.
 - Create a `<table>` with two columns: **"Skill"** and **"Level"**.
 - Add rows using `<tr>`, `<th>`, and `<td>` to list your skills.
6. **Insert an Image and a Link:**
 - Under another `<h2>` subheading called **"My Networks"**, add an `<img>` of your choice.
 - Include an `<a>` link to a social media profile or your favorite website.
7. **Hobbies and Technologies:**
 - Create two lists for your hobbies and technologies you are familiar with:
 - Use `<ol>` for your **hobbies**.
 - Use `<ul>` for the **technologies** you know.
8. **Audio / Video:**
 - Add an `<audio>` tag with the `controls` attribute to play an audio file.
 - Alternatively, use a `<video>` tag for a video file.
9. **Semantic Tags:**
 - Use semantic tags `<header>`, `<main>`, and `<footer>` to organize the page:
 - Place the **main header** inside `<header>`.
 - Place the **main content** inside `<main>`.
 - Inside `<footer>`, add a **copyright** phrase.
